CAREER OBJECTIVE

B.Tech CSE graduate with hands-on experience in Generative AI, RAG applications, full-stack development, and cloud computing through internships and personal projects. I enjoy building AI-powered solutions and am looking for a fresher role where I can contribute, keep learning, and grow alongside a great team. I communicate well in team environments, adapt quickly to new technologies, and enjoy collaborating to solve real-world problems.

EDUCATION

B.Tech — Computer Science & Engineering GIET Engineering College, Rajamahendravaram, Andhra Pradesh	2022 – 2026 CGPA: 6.9
Intermediate — MPC (11th & 12th) Sri Chaitanya Junior College, Tadepalligudem, Andhra Pradesh	2020 – 2022 55%
SSC — 10th Grade ZPP High School, Bommidu, Andhra Pradesh	2019 – 2020 GPA: 8.9

INTERNSHIP EXPERIENCE

Gen AI RAG Application Development Intern — ASA Solutions • Developed and enhanced RAG applications using Generative AI technologies, integrating LLMs with vector databases for intelligent document retrieval. • Designed SQL queries for data management, collaborated with the team on requirement gathering, development, testing, and delivering milestones on time.	Feb 2026 – Jul 2026
Java Full Stack Intern — TECWING • Developed UI screens using Java and Angular; collaborated with the team using Git, pull requests, and agile sprint cycles. • Gained hands-on understanding of how frontend and backend layers connect in a real-world project setup.	Jun 2025 – Aug 2025
AI/ML & Data Science Intern — Blackbucks Engineers • Worked on real-world datasets — cleaned data, handled missing values, and prepared features for model training. • Trained and evaluated ML models (classification, regression) and visualized results using Matplotlib and Seaborn.	May 2024 – Jul 2024

PROJECTS

Gen AI RAG Application • Built an AI-powered RAG application for intelligent document querying using semantic search with embeddings and vector databases. • Integrated LLMs to generate accurate, context-aware responses from uploaded documents in real time.	Python, LangChain, OpenAI API, SQL, Vector Database
RUL Prediction for AeroEngines — Final Year Project • Built a Flask web app to predict Remaining Useful Life of aircraft engines using sensor data, comparing 6 ML models — best accuracy achieved with Extra Trees and MLP. • Integrated SHAP Explainable AI for feature importance visualization and classified engine health into Normal, Warning, and Critical with maintenance recommendations.	Python, Flask, XGBoost, Random Forest, Extra Trees, MLP, SHAP, MySQL
Festio — Event Management Platform • Built a web-based event management platform for college fests with modules for event creation, registration tracking, and real-time updates. • Implemented secure authentication, Firebase database integration, and responsive design for seamless experience across devices.	React.js, JavaScript, Firebase, SQL, HTML, CSS

TECHNICAL SKILLS

Languages	Java JavaScript Python SQL
Frontend	HTML CSS React.js Angular (Basics)
Tools	Git & GitHub Firebase VS Code Postman LangChain ChromaDB AWS (Basics)
Soft Skills	Teamwork Problem-Solving Communication Time Management

CERTIFICATIONS

IT Specialist - Java (ITS) — Certiport, a Pearson VUE Business	2025
Gen AI RAG Application Development — ASA Solutions	2026
AI/ML & Data Science — Blackbucks Engineers	2024
